not recommended covers too much for one book

By A Customer

I used this book for a graduate career counseling course. It didn't set career development in an economic history which would explain why theory developed the way it did. Additionally, the book doesn't explain many of the theories so the student can delineate the differences between them. the author states that career counseling will soon integrate with other forms of counseling and yet, he doesn't point out obvious relationships between career theory and other psychological and developmental theories. There is a lot of guidance on counseling which covers both general and career skills. I would have liked the assessment

section to be much bigger and more practical and the school assessment section to be much smaller. Zunker has an assessment book and should probably take his huge section on school counseling and make a book from that. All together the book was very dry and boring.

A full exposure of the topic - from History to Application

By Frank Dieppa

I read all the other reviews, I get a feeling they are all from students. As a practicing professional in this field for the past 20 years, I can say that as Boles' "What Color is your Parachute" is the bible for Job Seekers, Zunker's "Career Counseling: Applied concepts of Life Planning" is the bible for the Career Counselor. I find Zunker's information well exposed for easy comprehension. His writing style is simple and straight-forward. I believe the book is well structured for its purpose and didn't get a 5 star rating because It should be more economical in pricing.

Do not buy this book!

If at all avoidable, **DO NOT WASTE YOUR MONEY ON THIS TEXTBOOK!!!!**

I am a graduate student just beginning a new semester. I have read the first four chapters of this book and am frustrated and angry. It is so poorly written that I am having to read and re-read the text (only to discover that most of what is contained therein is just the repeated fluff of a few simple points made ad infinitum). There is very little useful information. Were I a professor grading this text as a paper, I would give it a "D" and recommend Zunker spend some serious time in the "writing lab". I cannot believe I paid \$90 for this book.
